610-TIP-0802

**CARBIDE TIP**

3/4" (19 mm) long-wearing single shoot tip. Used for seeding or fertilizing (not for double shooting). Fits VOS (Versatile Opener System).

See page 44-45 for more information.

**BOLT & NUT COMBO**

This bolt and nut combination is used to secure tips with product numbers beginning in 200, 610, 612, 614, 620 & 628. It is important not to over tighten the bolt when installing the tips. The bolt has a strip of thread lock applied to the threads, so it needs only to be turned in by hand until the shoulder of the bolt makes contact with the nut.

The nut, 200-NUT-3101, and bolt, 200-BLT-3102, can be ordered separately.

Over torquing with a power drill will result in difficulty when removing. Recommended to torque to 84 in/lbs or 7 ft/lbs.
